

## Add Company Contacts

The tool 'AddCompanyContacts' adds all the employees that are enabled for OCS as a contact to the OCS Communicator Client, if needed in a separate group.

This makes sure that everybody in the organization can see the status of every colleague.

### Usage

1. Put the files on the OCS Front End server
2. Start powershell
3. Go to the directory of step 1
4. Start the script AddCompanyContacts.ps1  
If you want to add everyone to a group, add –Group “Group Name”

The script will now add all enabled users as a contact to all the enabled users contact list.
